

How to Use RoadPass Products.

Using Organic Melt 2350 – Step-by-Step Instructions

1. Prepare for the Storm (Pre-Treatment)

- Apply **Organic Melt 2350** *before* snowfall begins.
- This proactive approach **prevents snow and ice from bonding** to the surface.
- Works on **all surfaces** including asphalt, concrete, pavers, and stone.

2. Apply Evenly

- Use a sprayer or backpack sprayer like **The Camel Backpack Sprayer** for best results.
- Recommended application rate:
 - **Light snowfall:** 4–5 liters (1–1.5 gallons) per 1,000 sq. ft.
 - **Heavier snowfall:** Up to 6 liters (1.5 gallons) per 1,000 sq. ft.
- Be sure to **spray directly over the area** you want to keep clear of ice.
- **Avoid over-saturating** — a light, even coat is all you need.

3. After Snowfall

- **Shoveling may still be required** in heavy snow accumulation.
- Once the top layer of snow is removed, Organic Melt 2350 will **reactivate** and continue to prevent ice from forming.
- **No need to reapply** unless another snow event is expected.

4. Reapplication for Multiple Storms

- For back-to-back storms, **reapply as needed** to maintain ice prevention.
- Ensure surface is cleared before reapplying for best performance.

Helpful Tips

- **Paver Stone Surfaces:** Product may drain into lower grooves. This is normal and won't affect performance.
- **Overapplication:** A pudding-like texture may occur. Don't worry—it will dilute naturally and continue working.
- **Entryways:** Apply at least a **few feet away from doors** to avoid tracking when wet.
- **Sprayer Maintenance:** Rinse sprayer and nozzle with water after each use to prevent build-up and clogging.

Need Equipment?

- Pair Organic Melt 2350 with **The Camel Backpack Sprayer** for maximum coverage, pressure, and convenience.
